CMOS Image Sensor

Quarterly Market Monitor
2020
Yole's methodology for building market forecasts is different from other market research companies' methodologies:

- Our approach is to build a coherent model where the five year historical data from top product shipments, module sales, and bottom sensor production, with players' market share is collectively linked with detailed assumptions.
- Forecast are performed by carefully carrying forward the five year growth rate with the analyst appreciation of each application market dynamics in mind.

We collect data from several sources, including:

- Primary information from direct contacts and surveys with equipment & materials suppliers.
- Primary information from cost analysis and teardown reports conducted by System Plus Consulting.
- Secondary information from Quarterly/Annual report/publications of key players.
- Comparisons between publicly-available secondary data from WSTS, OICA, IFR etc.

As a result, we can present synthetic market metrics intrinsic to a specific industry:

- Our approach's main advantage is the delivery of homogeneous data, ranging from unit shipments and system sales to players' market share.
- We quarterly update the market information presented in this monitor.
